Company Profile

FKM Walzentechnik Dr. Freudenberg GmbH

FKM Walzentechnik is a specialist in developing, manufacturing and covering rolls with coverings made of polyurethane, nonwoven material and high temperature resistant materials. Upon request, we can also deliver all kinds of complete covered rolls. We supply to the steel and car industry, mechanical engineering sector and the textile, foil and paper industry.

Our modern, high-performance Technical Centre at FKM Walzentechnik creates concepts for completely new coverings and procedures. We work out formulae, processes and designs which fit seamlessly into our customers' production facilities.

Our employees' expertise extends far beyond the topic of rolls. Our service and expert consultation, before, during and after delivery, is valued highly by our customers. Our technical experts and engineers are available worldwide to find solutions if there are problems with production.

With its centrally located German headquarters in the Ruhr area, FKM Walzentechnik believes firmly in short delivery times and closeness with its customers. With plants in Frankfort, Illinois (near Chicago), in the USA and in the city of Kunshan (near Shanghai) in China, we are an international company. Thanks to our large network of sales and service partners, you can also contact FKM in Brazil, India or Turkey.

Our modern machine pool with CNC turning and grinding machines, a computer-controlled rotary coating plant for polyurethane and nonwoven fabric presses with pressing lengths up to over 5 metres (200 inches) guarantee the consistently high quality of FKM's products.
